**BARBARA BOYAN, PHD**
Dean, School of Engineering  
Virginia Commonwealth University

**RHIMA COLEMAN, PHD**
Assistant Professor  
Department of Biomedical Engineering  
University of Michigan

**EVE DONNELLY, PHD**
Assistant Professor  
Materials Science and Engineering  
Dale R. Corson Sesquicentennial Faculty Fellow  
Cornell University

**STEVEN R. GOLDRING, MD**
Richard L. Menschel Research Chair  
Hospital for Special Surgery  
Professor of Medicine  
Weill Cornell Medical College

**THOMAS P. SCULCO, MD**
Surgeon-in-Chief and Medical Director  
Korein-Wilson Professor of Orthopaedic Surgery  
Hospital for Special Surgery  
Chairman and Professor of Orthopaedic Surgery  
Weill Cornell Medical College

**LOUIS A. SHAPIRO**
President and CEO  
Hospital for Special Surgery

**MARJOLEIN VAN DER MEULEN, PHD**
Swanson Professor of Biomedical Engineering  
Sibley School of Mechanical & Aerospace Engineering  
Associate Dean of Research and Graduate Studies  
College of Engineering  
Cornell University

**MATTHEW L. WARMAN, MD**
Investigator, Howard Hughes Medical Institute  
Director, Orthopaedics Research Laboratories  
Boston Children’s Hospital  
Professor of Genetics and Orthopaedic Surgery  
Harvard Medical School

**MARIAN YOUNG, PHD**
Senior Investigator and Research Biologist  
Chief, Molecular Biology of Bones & Teeth Section  
National Institutes of Health/NIDCR
As Hospital for Special Surgery (HSS) celebrates its 150th anniversary, we are pleased to recognize one of our own with a special symposium, The Adele Boskey, PhD, Symposium on Mineralized Tissues, honoring Adele Boskey and her many contributions to HSS as a research scientist, educator and role model.

Dr. Boskey, who served as Director of Research at HSS from October 1993 to June 2002, has devoted her professional career to the study of the mechanism of Biologic Mineralization. Her pioneering work in the application of technologies to define the composition, structure and functional properties of bone and related mineralized tissues has played a critical role in the establishment and success of the present research programs at HSS. Among her most outstanding accomplishments has been the mentoring and development of the careers of new investigators.

In collaboration with Dr. Boskey, we have prepared an outstanding program that will include presentations by scientists who have worked with her and have made important contributions to the field of mineralized tissue research.

We look forward to your participation in the symposium.

Sincerely,

Thomas P. Sculco, MD
Surgeon-in-Chief

Steven R. Goldring, MD
Richard L. Menschel
Research Chair

Dr. Boskey is a physical chemist who has devoted her professional career to study the mechanism of Biologic Mineralization, with specific emphasis on the roles of phospholipids, noncollagenous proteins and collagen on bone and tooth formation. She has pioneered the application of infrared micro-spectroscopy and imaging for study of biomineralization, and most recently for the study of compositional changes in osteoporotic bones prior to and after therapy.

Dr. Boskey’s investigations have been constantly funded by NIH since the start of her career. She has served on various NIH Study Sections, Advisory Groups, Gold Ribbon Panels and Councils for the past 40 years. She was the first woman to be President of the Orthopaedic Research Society (1996-97) and went on to co-found the Women’s Leadership Forum which now assists other women in attaining leadership positions. She is a Professor of Biochemistry at Weill Medical College of Cornell University, a Professor of Physiology, Biophysics and Systems Biology at the Weill Graduate School of Medical Sciences, a Professor in the Field of Biomedical Engineering at Cornell University, and an Adjunct Professor of Biomedical Engineering at the City College of New York. Dr. Boskey was Director of Research at the Hospital for Special Surgery from October 1993 to June 2002. She has more than 360 peer reviewed publications in her fields of expertise and holds two U.S. patents. Her proudest accomplishments are the new investigators she mentored throughout her career.

Recent Awards

- The WLF Award (2011)
- Alfred Shand’s Award for Lifetime Achievement in Orthopaedic Research (2010)
- Election to American Institute of Medical and Biomedical Engineers (2009)
- Fellowship in the American Association for the Advancement of Science (elected 2005)
- The first in her field to win the NIH Merit Award (for DE-04141, 1987-1997)
