

## Current PostBac Researchers

Nathaniel Disser is a graduate of Gonzaga University. His project is “Mechanobiology of skeletal muscle and tendon during tissue growth and regeneration” in the laboratory of Dr. Christopher Mendias.

Adriana Echeverria Gonzalez is a graduate of Columbia University Fu Foundation School of Engineering and Applied Science. She’s studying “Rapid and precise diagnosis of joint infections using next-generation sequencing” in the laboratory of Dr. Laura Donlin.

Rhea Gulati is a graduate of Stony Brook University. Her research is focused on “Understanding immune regulation in disease” in the laboratory of Dr. Theresa Lu.

Michael Pierides is a graduate of Cornell University College of Engineering. He’s studying the “Contribution of the immunoproteasome in controlling TLR-induced inflammatory response” in the laboratory of Dr. Franck Barrat.

Sara Shanaj is a graduate of Hunter College, City University of New York. Her research is focused on “Precision medicine assays for infections and rheumatic disease” in the laboratory of Dr. Laura Donlin.
